Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention; and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 25 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Support for the combination of a silicide with one of the compounds on claim 24 cannot be found in the disclosure, therefore claim 25 is considered to contain new matter.

Claim Rejections - 35 USC § 102 and 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 14-18, 24 and 25 are rejected under 35 U.S.C. 102(a or e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Oda et al (5,804,523), Tajima et al (5,885,916) and Hintermayer (5,998,319), each taken alone.

Oda et al teach a silicon nitride body including $\text{SiO}_2/\text{Re}_2\text{O}_3$ of 1.6 to 3.8, see specific examples of Table 1. Densities are 98-100%, see Table 2. Furthermore, SiC, TiN and silicides may be added, column 5, lines 16-25.

Tajima et al also teach a molar ratio of $\text{SiO}_2/\text{Re}_2\text{O}_3$ of 1.6 to 3.5, see column 4, lines 47-50 and examples of Table 1. Furthermore, densities of 99% or greater are taught, Table 1.

Hintermayer teaches the addition of glass to silicon nitride bodies where the silica content exceeds the 65% required in the instant claims. See Table in column 3, lines 45-55. Also densities of 98,99% are taught, column 4, lines 4-15.

Claims 24 and 25 use "up to" terminology and therefor encompasses 0% of the recited components.

It is well settled that when a claimed composition appears to be substantially the same as a composition disclosed in the prior art, the burden is properly upon the applicant to prove by way of tangible evidence that the prior art composition does not necessarily possess characteristics attributed to the CLAIMED composition. In re Spada, 911 F.2d 705, 15 USPQ2d 1655 (Fed. Circ. 1990); In re Fitzgerald, 619 F.2d 67, 205 USPQ 594 (CCPA 1980); In re Swinehart, 439 F.2d 2109, 169 USPQ 226 (CCPA 1971).

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
